***Allowable Subject Matter***

The following is an examiner's statement of reasons for allowance: Claims 2-18 are allowed over the closest references cited below.

The present invention is drawn to a series of group 4 transition metal hydride complex, a catalyst comprising said transition metal hydride complex, and a method for producing a polyolefin wherein an olefin is polymerized in the presence of said catalyst. The metal complex contains three (substituted) cyclopentadienyl or indenyl groups with specific substitution pattern as described in the claim (see claims for full structural details).

Jacobsen *et al.* (U.S. 6,043,180) teaches compounds of the general formula  $Cp_3MX$  where X is hydride, *inter alia*, and Cp is cyclopentadienyl or cyclopentadienyl derivative such as tetramethylcyclopentadienyl and pentamethylcyclopentadienyl. Compounds are used as components in supported catalysts for olefin polymerization. The reference does not teach compounds having the claimed substitution pattern.

Welborn *et al.* (U.S. 5,324,800) discloses a series of group 4 tricyclopentadienyl halides and alkyl complexes. There is no disclosure of group 4 tricyclopentadienyl hydride complexes.

Sinn *et al.* (*Angew. Chem.*, 1980) discloses  $Cp_3Zr-H-AlEt_3$  complex which dissociates into free hydride in solution. The reference does not teach the compounds of the instant invention.

Seki *et al.* (U.S. 6,150,544) discloses a series of group 4 trisindenyl and indenyldicyclopentadienyl bridging hydride complexes. The compounds of the instant invention are free hydride species rather than bimetallic, bridging hydride compounds.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
